

## Enabling Improved Information Sharing Throughout Your Extended Enterprise

### OVERVIEW

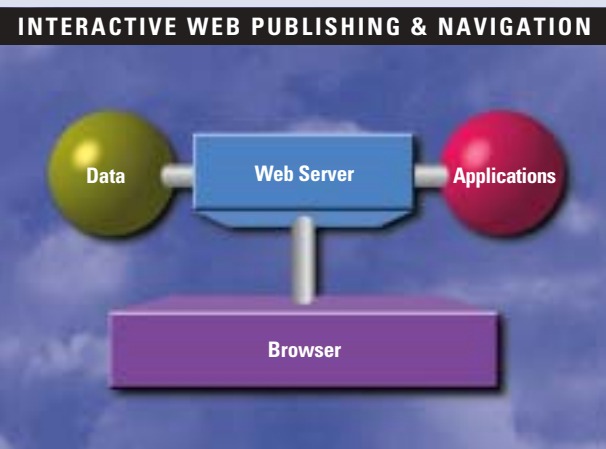

HP's Intranet Interactive Publishing and Navigation Solutions provide superior web site hosting and content management. Quick and easy access to any type of content including super-high resolution images improves productivity in areas such as product marketing, customer service and engineering design. And, with on-line access to documents like benefits and policy manuals, significant cost savings can be achieved by eliminating mass printing and distribution.

HP's core solution is based on the HP Domain Business Suite which integrates Netscape Enterprise Server and Suite Spot technology with HP OpenMail industrial strength enterprise messaging environment and an HP OpenView-based integrated system and network-management facility. HP partners with leading content management suppliers to address your growing content management concerns. HP and partners offer specialized services to ensure the success of your web site development and deployment.

HP complements its solution with support for unique capabilities for image archival, viewing, and output. These capabilities include efficient display and printing of photographic quality digital images. These advanced imaging capabilities will create new business processes in areas such as on-line catalog shopping, digital photofinishing, and remote document distribution.

### SOLUTION ENVIRONMENT

The HP Domain Business Suite provides the only intranet-ready, fully functional environment for information access as well as collaboration, including integrated messaging and management facilities. The HP Domain Business Suite is built on the high performance and scalable HP Domain Enterprise Server family, which delivers the power and versatility required of today's web engines. The HP Domain Enterprise server runs the industry leading enterprise operating environment HP-UX, which offers the richest assortment of commercial applications of any UNIX®-based platform, making it the ideal deployment platform to address your evolving Internet solution needs.

### THE HP ADVANTAGE

- Internal Experience Building and Deploying the World's Largest Intranet
- Industry Leading Web Site Deployment Platform
- Unique Digital Imaging
- Professional Services and Support

### CONSULTING AND INTEGRATION SERVICES

HP's worldwide team of consultants can help you assess your intranet information access requirements, design solutions that meet your business needs, and implement these solutions enterprise-wide. HP also offers WebStart, infrastructure and security services to build, secure and manage your intranet.

### UNPARALLELED CUSTOMER SUPPORT

HP's world-leading Customer Support services provide the most comprehensive levels of support available anywhere, including 24x7 support for mission-critical applications.

For the intranet, HP's support services include direct HP support for all Netscape products worldwide. Additionally, HP offers customer education and training for the entire range of Netscape products at our Customer Education facilities worldwide.

For more information contact your local Sales Representative or <http://www.hp.com/go/intranet>

### HOT SOLUTION PARTNERS

**Netscape Communications Corporation.**  
Netscape SuiteSpot is a suite of integrated servers that enables businesses and workgroups to publish interactive Web sites and communicate and collaborate more effectively.

**Excite, Inc.**  
Excite for Web Servers adds Web server content indexing and search capabilities to Web servers.

**Innotech Multimedia Corporation.**  
Net Results is a Java™ based, cross platform search and retrieval engine.

HP helped the US government National Technical Information Service provide online access to a compendium of government publications and documents via its Web site known as FedWorld.

“We selected Hewlett-Packard to provide our Web server platform because of its scalability. We implemented the HP 9000 servers within three weeks.”

*Kevin Hawkins  
System & Network Manager  
FedWorld Systems Group*

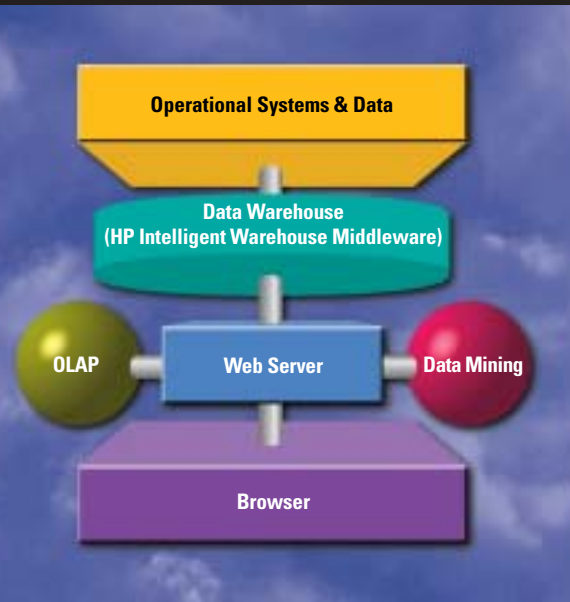

## Enabling Secure, Manageable Web-based Data Access Throughout Your Extended Enterprise

### OVERVIEW

HP's Intranet Enterprise Data Access Solutions enable breakthroughs in cost-effective and secure enterprise information access for business-critical decision support. HP is taking its industry leadership in data warehousing and enterprise data management solutions to the Web. Working with best-in-class partners, HP offers a complete set of tools for intuitive browser-based access to multiple data types and sources as well as the experience to ensure the success of your enterprise-scale information access project.

These solutions are deployed on the HP Domain Enterprise Server family, the market leader in performance, reliability, security, integration and management.

### HP OPENWAREHOUSE WEB FRAMEWORK

### OPENWAREHOUSE WEB

HP OpenWarehouse Web is HP's solution for delivering and managing cost-effective universal access to data warehouse applications via the Web. This solution provides Web-browser access in a fully-managed, security-enhanced environment. This complete decision support solution consists of the industry leading HP Domain Enterprise Server Web platform, powerful HP data warehouse management and security middleware, a comprehensive array of HP and partner Web-based decision support applications, and experienced and dedicated consulting services from HP and certified resellers.

HP Praesidium security framework, including HP's Virtual Vault technology, enables companies to grant warehouse access to external (Internet) users as well as intranet-based employees. And, HP's unique data warehouse management middleware, Intelligent Warehouse, addresses growing performance and manageability concerns as query volumes grow. Intelligent Warehouse is designed to save time and money by reducing the administrative burden of managing performance and by increasing the ease-of-use for end-users on an enterprise-wide scale. HP's DataMart Manager addresses performance and manageability for more limited scope data warehouses and data marts. HP's data warehouse management products allow an organization to effectively manage all of an organizations' end-user applications through a single administrative interface.

### THE HP ADVANTAGE

- Best Web-based Deployment Environment
- Leading Data Warehousing Vendor
- Superior Data Warehousing Management and Security
- Unique, Innovative Technology such as the Internet Process Manager
- Focused Professional Services

### SOLUTION ENVIRONMENT

The OpenWarehouse solution supports access from any client type to an HP Domain Enterprise Server, which in turn accesses the data warehouse environment. The data warehouse environment includes the data warehouse database which can access multiple operational databases and may include the Intelligent Warehouse server for performance management.

The HP Domain Enterprise Server includes the HP Domain Business Suite which bundles Netscape Enterprise Server and SuiteSpot technology, HP OpenMail industrial strength messaging and an HP OpenView-based integrated system and network management. The HP Domain Business Suite is built on the high performance and scalable HP 9000 Enterprise Server family which delivers the power and versatility required of today's Web and data warehouse database engines. And, because the HP 9000 Enterprise Server runs the most popular commercial UNIX® operating environment, HP-UX, it is the ideal environment for implementing Web-based data warehousing solutions.

### CONSULTING AND INTEGRATION SERVICES

HP's worldwide team of consultants can help you assess your intranet data access needs, design solutions that meet your business needs, and implement these solutions enterprise-wide.

In combination with HP's WebStart, infrastructure, and security services, OpenWarehouse Web services include: Web/data warehouse architecture design and implementation, internet security risk assessment, internet design and implementation and browser application development. In addition, HP's worldwide partnerships with systems integrators such as Price Waterhouse and other service providers offer a range of Internet services that complement HP's solutions.

### UNPARALLELED CUSTOMER SUPPORT

HP's world-leading Customer Support services provide the most comprehensive levels of support available anywhere, including 24x7 support for mission-critical applications.

For the intranet, HP's support services include direct HP support for all Netscape products worldwide. Additionally, HP offers customer education and training for the entire range of Netscape products at our Customer Education facilities worldwide.

For more information contact your local Sales Representative or <http://www.hp.com/go/intranet>

## Enabling Teamwork Throughout Your Extended Enterprise

### OVERVIEW

HP supports the leading approaches to implementing collaboration solutions across your extended enterprise. You can choose between integrated suites such as Netscape SuiteSpot and Lotus® Notes® as well as best-in-class point solutions for both asynchronous and real time collaboration. No matter which approach you take, HP offers the best deployment platform available today — a scalable Web server family providing enterprise-class performance, resiliency, and management. HP's solutions are complemented with the necessary consulting, support, and training to ensure the successful deployment of your enterprise collaboration strategy.

With today's competitive business environment and the unrelenting demands on people's time, it's more important than ever to enable knowledge workers to communicate and collaborate effectively across organizational and geographic boundaries. Intranet collaboration offers dramatic improvements in productivity, while offering state-of-the-art document revision control, security, and replication services for office and mobile users.

### KNOWLEDGE-WORKER COLLABORATION

### Lotus Notes Approach.

Lotus Notes/Domino provides an integrated Web solution environment providing secure collaboration, distributed authoring and workflow easily managed from any Web browser. This solution is excellent for companies who need high-end collaboration features such as rich security access controls and support for nomadic users through replication services.

### HP'S KNOWLEDGE WORKER SOLUTIONS

HP supports three approaches to implementing intranet collaboration solutions for knowledge workers:

#### Netscape-based HP Domain Business Suite Approach.

<http://www.hp.com/go/intranet>

The HP Domain Business Suite provides the only intranet-ready, fully functional environment for collaboration. It includes Netscape Enterprise Server and SuiteSpot technology, HP OpenMail industrial strength messaging and an HP OpenView-based integrated system and network management facility.

Supported collaboration applications include newsgroups, e-mail, calendaring, scheduling, bulletin boards, document cataloging and discussion databases.

Netscape's SuiteSpot also includes an application development environment.

This solution is ideal for companies that want IT-enabled collaboration to grow naturally within an organization by providing pervasive access to collaboration tools. This solution delivers intranet information access and collaboration with the flexibility to add best in breed collaboration applications.

“Hewlett-Packard is poised to be the definitive provider of services to companies doing business over the Internet and to companies using the intranet for workgroup computing.”

*Hurwitz Balanced View, 1996*

### THE HP ADVANTAGE

- Internal Experience Building and Deploying the World's Largest Intranet
- Choice of Netscape, Lotus or Best-in-Breed Applications
- Best Collaboration Deployment Platform
- Professional Services and Support

### Best-in-Breed Approach.

HP and its partners also offer best-in-breed applications for customers who prefer to mix and match or whose needs require the integration of specialized capabilities such as document management, project management, conferencing and meeting management applications.

### SOLUTION ENVIRONMENT

These solutions are built on the high-performance, highly scalable HP Domain Enterprise Server family which delivers the power and versatility required of today's Web engines. The HP Domain Enterprise Server runs the industry leading enterprise operating environment, HP-UX, which offers the richest assortment of commercial applications of any UNIX®-based platform, making it the ideal deployment platform to address your evolving Internet solution needs.

### CONSULTING AND INTEGRATION SERVICES

HP's worldwide team of consultants can help you assess your intranet collaboration requirements, design solutions that meet your business needs, and implement these solutions enterprise-wide.

In combination with HP's WebStart, infrastructure, and security services, HP's internet collaboration services help you successfully get started with internet collaboration. Services cover: Knowledge Management, Workforce Collaboration, Mobile Professionals, and Change Management as well as Intranet Messaging and Enterprise Management. In addition, HP's worldwide partnerships with Systems Integrators and other service providers offer a range of Web collaboration services that complement HP's solutions.

### UNPARALLELED CUSTOMER SUPPORT

HP's world-leading Customer Support services provide the most comprehensive levels of support available anywhere, including 24x7 support for mission-critical applications.

For the intranet, HP's collaboration support services include direct HP support for all Netscape products worldwide. Additionally, HP offers customer education and training for the entire range of Netscape products at our Customer Education facilities worldwide.

For more information contact your local Sales Representative or <http://www.hp.com/go/intranet>

“Connectivity is the key to success in today's global economy. The value of human resources and know-how is multiplied if they can be tied together through a powerful network that provides access to information and enables global teamwork. This is the vision of Marsh & McLennan Inc.'s Mpower initiative. Hewlett-Packard is playing a leading role in the achievement of that vision.”

## Delivering Compelling Cost Savings and Productivity Gains

### OVERVIEW

HP's Intranet-based Automated Administration solutions are designed to dramatically reduce the cost of repetitive administrative tasks such as expense authorizations through the use of innovative workflow technology. Combined with HP's leading solution platform and consulting, support, and training capabilities, HP and partners provide complete inter-enterprise scale solutions for automating your collaborative administrative processes. No other major systems vendor is addressing this opportunity. HP can help you leverage its internal experience building and deploying a Fortune 50 scale Automated Administration solution.

By handling simple, repetitive administrative processes online, costs associated with printing, distribution, and error-prone manual paperwork are slashed. At the same time, processes complete swiftly by virtually eliminating routing time and minimizing "in tray" time. And, when processes such as expense reimbursements are linked to back-end financial systems or change orders are linked to back-end manufacturing systems, processes complete in a more predictable and timely manner. This improves end-user satisfaction as well as the bottom line.

### ADMINFLOW SOLUTION

AdminFlow is an administrative workflow product that is easy to implement and manage. AdminFlow facilitates implementation by including six prepackaged workflows for collaborative decision-making tasks such as expense authorization. Management is simplified since AdminFlow is roughly 25 times faster than competitive workflow engines (measured in nodes processed per hour). This means that rather than having many distributed workflow engines with their inherent administration and reliability concerns, just one or a few AdminFlow engines are needed. The management burden is further minimized by a sophisticated role definition capability which handles the complexities that arise from job or function changes. Finally, AdminFlow provides complete support for disconnected, mobile users. At HP an estimated 40% of the users that authorize forms are mobile.

### Pre-defined Workflows

1. Employee Reimbursement
2. Travel Request
3. Facilities Work Order
4. Bulk Mailing
5. Serial Form Routing & Approval
6. Basic Survey (voting)

### THE HP ADVANTAGE

- Internal Experience Building and Deploying the World's Largest, Intranet-Based Automated Administration Solution
- Unique AdminFlow Software
- Professional Services and Support

### HEWLETT-PACKARD'S SUCCESS WITH ADMINFLOW

Hewlett-Packard has adopted administrative automation enterprise-wide using AdminFlow technology to expedite tasks such as benefits updates, PC equipment purchases, manufacturing change orders, wage reviews, and employee reimbursements. Through the use of business rules, the appropriate checks and balances are built into the system, allowing for proper authorizations and exception-based human intervention. The result has been increased user satisfaction, faster and more easily tracked transactions and a dramatically lower cost of administrative services. US employees receive direct deposit petty cash reimbursements within two days of form submission. HP also benefited from a shortened learning curve and reduced training costs because each form has a similar look and feel.

### SOLUTION ENVIRONMENT

AdminFlow can be used either with a Web server and HTML forms, or with HP OpenMail, Microsoft® Exchange or Lotus® Notes® e-mail systems. For the Web server implementation option, HP offers the HP Domain Business Suite which includes Netscape Enterprise Server and SuiteSpot technology, HP OpenMail industrial strength messaging and an HP OpenView-based integrated system and network management facility. The HP Domain Business Suite is built on the high performance and scalable HP Enterprise Server family which delivers all of the power and versatility required of today's internet servers.

### CONSULTING AND INTEGRATION SERVICES

HP's worldwide team of consultants can help you assess your intranet administrative requirements, design solutions that meet your business needs, and implement these solutions enterprise-wide.

### UNPARALLELED CUSTOMER SUPPORT

HP's world-leading Customer Support services provide the most comprehensive levels of support available anywhere, including 24x7 support for mission-critical applications.

For the intranet, HP's support services include direct HP support for all Netscape products worldwide. Additionally, HP offers customer education and training for the entire range of Netscape products at our Customer Education facilities worldwide.

For more information contact your local Sales Representative or <http://www.hp.com/go/intranet>

“ [Using AdminFlow technology], HP has reduced costs significantly with workflow-enabled processes, like petty cash and employee benefits updates. ”

Bob Walker  
Chief Information Officer  
Hewlett-Packard

### SOLUTION ALTERNATIVE: FileNet's Ensemble

Ensemble is an easy-to-use, desktop, e-mail-based tool for non-programmers to automate adhoc, administrative and collaborative workflows. Ensemble integrates with FileNet's enterprise production workflow product, Visual Workflow. HP recommends FileNet's Ensemble product in cases where the end-user will be creating workflows real time and without IT support.

## Unleashing the Power of Your Extended Enterprise for Competitive Advantage

### OVERVIEW

HP's Internet-enabled core business transaction (CBT) solutions unleash competitive advantage by enabling companies to re-invent business processes such as order fulfillment in order to dramatically impact customer responsiveness. HP CBT solutions also enable new business processes that access new markets and customers or expand distribution channels for new revenue-generating services. Re-defined and new business processes in the areas of distributed inventory management, order entry, electronic banking and trading are being made possible by the rapid adoption of the Internet for commercial purposes and by HP key technology advances in areas such as distributed security.

### HP supports four solution approaches to taking your CBTs to the net.

**Web Front-ending.** Browser-based access to custom and packaged applications can extend application and information access across the enterprise and to suppliers and customers. HP has world-class partnerships with established application suppliers such as SAP that have upgraded their applications to take advantage of the browser interface. HP also supports leading vendors of tools that allow you to enhance your existing applications with a browser front-end.

**New "Off-the-shelf" Internet Applications.** Many application suppliers offer Internet-ready applications you can implement today in areas such as Internet Commerce. HP supports the leading application suppliers such as Connect, Inc., Harbinger, and Open Market.

### New Application Development.

Many companies want to develop their own server-based Java™ applications and browser applets to take advantage of Java's "write once, deploy anywhere" model. HP is SunSoft's first licensee of the Java Workshop which provides a complete integrated Enterprise Java Development Environment for HP-UX and Windows NT™ environments. And because Java Virtual Machine is supported on all HP-UX systems, Java programs can be executed on any HP-UX server or workstation. HP also supports leading vendors of tools that enable your custom applications to access legacy data.

**Internet Process Management.** HP provides its unique Internet Business Process Manager middleware to enable extended enterprise transactional processes such as inter-enterprise supply chain management. By using this technology rather than custom coding inter-application communications, companies can leverage their intranet infrastructure to cost-effectively integrate robust mission-critical workflows across disparate systems and organizational boundaries.

### KEY SOLUTION PARTNERS:

#### Business Applications:

Baan  
BEA  
Computer Associates  
DBS  
Edify Corporation,  
FileNet

### THE HP ADVANTAGE

- World-class CBT Solution Partners
- Leading Enterprise Java Development Environment and Tools
- Best Internet Deployment Environment: Performance, Resilience, UNIX/NT Integration, Security, and Management
- Unique, Innovative Technology such as the Internet Process Manager
- Security Industry Leadership
- Experience

“We feel that HP's Domain Internet Solution is going to position us very effectively to continue our direction toward Internet enablement of many of our applications.”

*Lorne McLachlan  
Director of Information Technology, BC Transit*

### SOLUTIONS ENVIRONMENT

The HP Domain Enterprise Server family provides the ideal deployment platform for your CBT solutions. These servers are tightly integrated with the HP Domain Business Suite — comprised of Netscape Enterprise Server and Netscape SuiteSpot, HP OpenMail, and HP OpenView — which provides the industry's only intranet-ready, fully-functional middleware environment for mission-critical solutions.

HP summarizes deployment platform advantages using a concept called PRISM, which stands for Performance, Resilience, Integration, Security, and Management.

**Performance.** HP Enterprise Servers provide leading performance for Web, application, and database processing as measured by standard industry benchmarks.

**Resilience.** HP's high-availability solutions including high availability Web cluster solutions provide the 24x7 service levels required for your mission-critical CBT environments.

**Integration.** HP's support for mixed platform computing environments, makes HP the best choice for companies needing to connect and interoperate between UNIX, NT, and mainframe systems.

**Security.** HP is the world leader in internet security. HP's security framework, Praesidium, offers a comprehensive desktop-to-data center security strategy for safeguarding business on the net.

**Management.** HP's de facto standard OpenView system and network management framework along with the broadest solution partner portfolio and services, deliver a complete, integrated, end-to-end solution to managing your intranet infrastructure.

### CONSULTING AND INTEGRATION SERVICES

HP's worldwide team of consultants can help you assess your transactional requirements, design solutions that meet your business needs, and implement these solutions enterprise-wide. In combination with HP's WebStart, infrastructure, and security services, HP's internet services help you successfully get started building your extended enterprise. Services cover assessment, design and implementation. In addition, HP's worldwide partnerships with Systems Integrators such as Andersen Consulting, EDS, Cap Gemini, CSC and niche systems integrators such as Platinum Solutions and iCube offer a range of services that complement HP's solutions.

“HP is about to become a dominant provider of Internet services and software, particularly in the area of security and electronic commerce.”

*Hurwitz Balanced View, 1996*

“Everyone in the industry told us it was a three year project [to put together the World Merchandising Exchange system]. With HP joining our team we went live in about twelve months.”

*Jim Griffiths  
Vice President, Sales & Marketing  
WOMEX*

### UNPARALLELED CUSTOMER SUPPORT

HP's world-leading Customer Support services provide the most comprehensive levels of support available anywhere, including 24x7 support for mission-critical applications.

For the intranet, HP's support services include direct HP support for all Netscape products worldwide. Additionally, HP offers customer education and training for the entire range of Netscape products at our Customer Education facilities worldwide.

## Taking HP's Unix Leadership to the Web

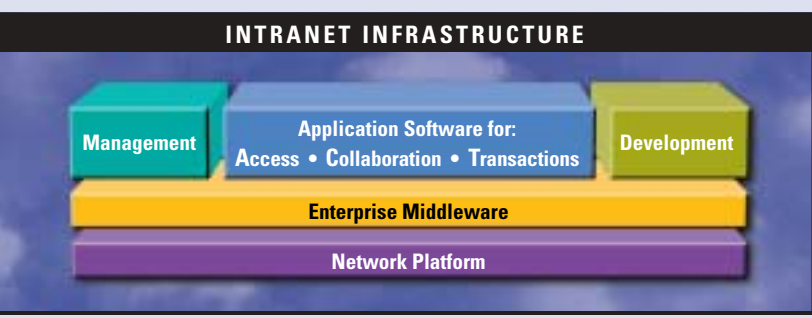

### OVERVIEW

All Intranet Solutions require supporting infrastructure. For publishing solutions that can be implemented with a stand-alone Web server, the impact to your existing infrastructure may be minimal. In contrast, Electronic Commerce solutions can require sophisticated security integrated with existing operational systems from several companies. As a result of HP's open systems and networking leadership and experience managing its own corporate intranet, HP understands the range of people, process, and technology needs involved in evolving your infrastructure to support intranet solutions. HP's pragmatic step-wise implementation approach allows you to implement your high-priority solutions while laying the required infrastructure that you will leverage in follow-on projects.

In addition to solution-specific application software, HP and partners provide the supporting management, application development, middleware and hardware/networking infrastructure.

### MANAGEMENT

- HP's industry-leading OpenView systems and network management framework, along with a broad solution partner portfolio and services, delivers a complete, integrated, end-to-end solution to managing your intranet infrastructure.
- The Praesidium/Authorization Server simplifies intranet administration by providing a convenient GUI interface to manage security rules and privileges that are common to all enterprise applications.

### APPLICATION DEVELOPMENT AND DEPLOYMENT

- Java™ Workshop provides a complete integrated Enterprise Java Development Environment for HP-UX and Windows NT™ environments.
- Java Virtual Machine is supported on all HP-UX systems.
- HP supports leading vendors of tools that enable your applications to access legacy data.
- HP supports leading vendors of software engineering tools.

### ENTERPRISE MIDDLEWARE

**Messaging.** HP's highly scalable OpenMail-based messaging features guaranteed, auditable message delivery, rich mobile client support and centralized mail backup from the server. OpenMail allows you to install and support new Web clients while concurrently and natively supporting legacy mail clients.

**Process Management.** HP provides its unique Internet Business Process Manager middleware to enable extended enterprise transactional processes such as inter-enterprise supply chain management.

### KEY INFRASTRUCTURE PARTNERS:

#### Internet Management:

- BMC Software
- Platinum Technology
- Andromedia
- Cisco

#### Development Tools:

- Antares
- Dynasty
- Forte Software, Inc.
- HAHT Software
- NetDynamics, Inc.
- Passport
- Progress Software
- Seer
- Speedware
- Texas Instruments

#### Middleware:

- BEA Systems
- Deloitte & Touche, Ernst & Young
- GemPlus
- Gradient Technologies
- Informix
- Notel
- Open Horizon
- Raptor Systems
- Schumann
- SecureWare
- Secure First Technologies

#### Networking and Hardware:

- Cisco

**Security.** HP is the world leader in internet security. With HP's Praesidium framework, HP can build custom, centrally managed, end-to-end security solutions that go beyond simple firewalls and encryption to provide a higher level of security for NT, UNIX, and legacy environments. Key products:

- Praesidium/ImagineCard. ImagineCard is a turn-key solution for easy deployment and maintenance of secure corporate applications or Internet business services involving either exchange of electronic documents or online access to distributed services.
- Praesidium/Virtual Vault. Virtual Vault enables secure transactions on the Internet. VirtualVault is the ideal solution for customers needing to provide external access to internal systems, or for customers requiring a very high level of internal security.
- Praesidium/Authorization Server. The Authorization Server improves security at the application level by controlling user access privileges to enforce corporate security policies.
- Praesidium/Single Sign-on is a robust, multi-platform, enterprise-wide, single login solution. For users, single sign-on means one login to access multiple applications and Web sites. For the administrator, single sign-on improves user administration and security. For IT managers, the level of enterprise security is increased through authentication, authorization, certification and data integrity.

### NETWORK PLATFORM

**Server and networking.** HP's world leading 64 bit PA-8000 CPU technology running the UNIX operating environment continues its proven track of performance, investment protection, and robust commercial functionality. In addition, HP's Intel-based family of NetServers is the fastest growing NT server in the market. To meet the exploding demand for high bandwidth and scalable solutions, HP offers a comprehensive set of high-speed networking products, ranging from 100Base-T and 100VG-AnyLAN solutions to FDDI connections, and from ATM products to a Fiber Channel family of products.

**Mixed Environments.** HP's support for mixed platform computing environments makes HP the best choice for companies needing to connect and interoperate between UNIX, NT, and mainframe systems. HP's Colliance program, consisting of six core technology areas for integration (networking and system management, security, messaging, application environment, connectivity, and Internet/objects) guides HP technology investment decisions and ensures that HP products and services support mixed environments.

### INVESTMENT PROTECTION

HP has a stellar track record for HP-UX systems binary compatibility for application investment protection. HP offers superior systems investment protection through board upgrades and common components. Looking forward, HP's merged HP/Intel architecture ensures that today's HP systems provide the safest path to the future.

### GLOBAL SERVICE AND SUPPORT

HP Professional Services Organization (PSO) provides a comprehensive range of services to help customers assess, design and implement intranet infrastructure. Having an intranet and linking an enterprise to the Internet is prompting many organizations to reevaluate their network and security requirements. With more than a decade of experience in designing and building TCP/IP-based networks, HP PSO excels at helping customers review and establish the level of security based upon their business and application needs. HP PSO also offers a range of educational and consulting services to help customers understand and take advantage of the impact of intranets on business performance. HP PSO complements its services with its established partnerships with other leading services providers such as Anderson Consulting and CAP Gemini.

For more information contact your local Sales Representative or <http://www.hp.com/go/intranet>
